

Clinical Pharmacology Update

“A Compendium for the Treatment of Hypertensive Emergencies” is designed as a treatment guide and educational tool for the practicing physician and for physicians in training. It is an appropriate contribution to this memorial issue for Bruce H. Stewart, M.D., in view of his rec-

ognition as an outstanding teacher and his intense interest in urologic problems associated with severe hypertension. The authors, being from a related service, worked closely with Dr. Stewart during his decades at the Cleveland Clinic.

DONALD G. VIDT, M.D.
ALAN BAKST, PHARM. D.
