INTERPRETING KEY TRIALS

Lipid-lowering therapy after coronary artery bypass surgery: the Post-CABG trial 347

The Post-CABG trial is an important milestone that demonstrates the benefits of treating hypercholesterolemia in patients who have had bypass surgery.

W.J. STEWART AND B.J. HOOGERWERF

MEDICAL GRAND ROUNDS

Pitfalls in managing routine medical problems of patients with spinal cord injury 352

Physicians caring for patients with spinal cord injury need to know how to apply management strategies uniquely appropriate in these patients.

F. FROST

CURRENT DRUG THERAPY

How physicians can prevent medication errors: practical strategies 355

Until improved systems are in place to detect and analyze medication errors, physicians can prevent many serious medication errors by observing some basic safety practices.

E.H. JONES AND R. SPEERHAS

CLINICAL DECISION-MAKING AT THE CROSSROADS

Arthralgias, myalgias, facial erythema, and a positive ANA: not necessarily SLE 361

Physicians frequently see patients with vague musculoskeletal complaints and intermittent rashes who are thought to have a connective tissue disease.

CLINICAL REVIEWS

**Adult respiratory distress syndrome:
current management,
future directions 365**

Half of the patients who develop ARDS die of it. However, a number of new ideas about supportive management and experimental therapies offer hope of reducing the mortality rate.

**Standards of care
for treating headache
in primary care practice 373**

These guidelines, developed by the National Headache Foundation, target diagnosis, therapy and referral.

NATIONAL HEADACHE FOUNDATION
STANDARDS OF CARE COMMITTEECANCER DIAGNOSIS
AND MANAGEMENT
**Inpatient management
of acute leukemia 385**

In treating acute leukemia, there are four medical emergencies that require immediate attention: infection, hemorrhage, hyperleukocytosis, and tumor lysis syndrome.
