TABLE OF CONTENTS

FROM THE EDITOR	
Sleep is like Rodney Dangerfield Sleep quantity (and, in some cases, quality) has been shown to impact memory and learning, mood, appetite, and pain, yet many patients and clinicians do not give sleep the respect it deserves.	9
Brian F. Mandell, MD, PhD	
THE CLINICAL PICTURE	
Common electrolyte imbalance, uncommon cause A 47-year-old woman presented with 10 days of weakness, wide purple striae on the abdomen, and hyperpigmentation on the knuckles.	13
Saurav Shishir Agrawal, MD, DM; Sunil Kumar, MD; N. K. Soni, MD; Swati Paliwal, MD	
1-MINUTE CONSULT	
How can I better recognize and manage delirium in my hospitalized patients?	17
By knowing common precipitants and mimickers of delirium and considerations for workup, clinicians can implement nonpharmacologic preventive strategies, better identify patients experiencing delirium, and optimize symptom management.	
Amanda Pomerantz, DO; Anna P. Shapiro-Krew, MD; Andrew Coulter, MD, MA	
SYMPTOMS TO DIAGNOSIS	
Shortness of breath in a 52-year-old man with HIV and severe mitral regurgitation	23
The patient presented with 3 weeks of acute on chronic dyspnea on exertion with progression to dyspnea at rest and associated orthopnea.	
Felix Wangmang, MD, PharmD; Achilles Aiken, MD; Kuang-Yuh Chyu, MD, PhD
