

Festschrift in Honor of Bruce Hubbard Stewart, M.D.

With the passing of Bruce H. Stewart, M.D., the urologic community lost one of its most talented and productive members. Although Dr. Stewart practiced during an era of increasing subspecialization within urology, he was an acknowledged leader in several fields, including infertility, renal transplantation, renovascular disease, and adrenal surgery. The education of residents in urology was particularly important to him, and he applied his special ability to this

endeavor with enthusiasm and dedication. Those of us who had the privilege of training under Dr. Stewart considered him a role model, and we are still guided by his teachings during our current practices.

This issue of the CLEVELAND CLINIC QUARTERLY includes papers from former residents and colleagues of Dr. Stewart that are truly reflective of his wide range of interests in urology. I am deeply grateful to all of the authors for their help and honored to serve as guest editor of this section.
